

The screenshot shows a web browser window with the URL tlu.edu.vn. The main content area displays the university's homepage, featuring a banner for the "HỘI NGHỊ KHOA HỌC THƯỜNG NIÊN - NĂM 2025" (Annual Scientific Conference - Year 2025). Below the banner are sections for "TIN TỨC" (News) and "THÔNG BÁO" (Announcements), each listing several items. The "THÔNG BÁO" section includes a photo of a group of people at a conference table. To the right of the browser window is the Network tab of the developer tools, which shows a list of network requests. The top request is for the URL <https://tlu.edu.vn/> with a status code of 200 OK. The request headers and response headers are also visible.

Request URL: <https://tlu.edu.vn/>

Request method: GET

Status Code: 200

Câu hỏi của tôi là: Tại sao khi browser client gửi request , phía server làm thế nào để biết được các method và URL cần response?
